Dear Hiring Manager,

I am writing to express my interest in a Software Engineer position at your organization. With over five years of professional experience building enterprise-grade web applications and scalable SaaS systems, I bring a solid track record of delivering robust, maintainable software that drives real business value.

In my current role as Software Engineer L-II at VivaSoft Ltd, I architected and implemented a multi-tenant, multi-database SaaS platform from the ground up — a system designed to handle secure data isolation across multiple clients while keeping everything synchronized reliably. I also built out microservices on Azure with CI/CD pipelines, which significantly cut down deployment time and made the whole infrastructure easier to scale. One of the more technically interesting challenges I tackled was designing a data synchronization engine that pulls from third-party APIs on a 30-minute automated cycle, with an option for users to trigger real-time syncs on demand. These are the kinds of problems I genuinely enjoy solving.

Before VivaSoft, I spent nearly two years at ReliSource, where I worked heavily with the OutSystems low-code platform to deliver enterprise web and mobile applications — cutting development cycles by around 40% without compromising quality. I integrated third-party APIs, worked with cross-functional teams, and built custom client solutions that needed to be both performant and easy to maintain long-term. Earlier, at Adipster Tech Limited, I developed and maintained .NET applications while sharpening my understanding of clean code practices and team-based delivery workflows.

My core stack is .NET (C#), React JS, and SQL Server, and I have hands-on experience with Azure cloud services, Entity Framework, REST APIs, Okta for identity management, and tools like Angular and TypeScript. I hold a B.Sc. in Computer Science and Engineering from United International University with a CGPA of 3.87 out of 4.0, and I continue to stay current with modern development practices.

What drives me is building software that actually works well at scale — systems that are thoughtfully designed, easy for teams to extend, and reliable enough that clients trust them. I work well in Agile environments, adapt quickly to new domains, and take ownership of the work I put my name on.

I would welcome the opportunity to learn more about your team and discuss how my background might be a good fit. Thank you for your time and consideration.

Sincerely,

Labib Tajremin
